

Amendments to the Claims

1-4. (cancelled)

5. (original) A method of hanging a vertical side panel (26) of an electrical cabinet, comprising engaging a top flange of the side panel (26), which top flange has a horizontal portion (28), over an upper suspension member of a frame of the cabinet, and engaging a horizontal lower flange (44) of the side panel (26) with an upturned hook portion (47) at the lower end of the frame of the cabinet such that the upturned hook (47) projects upwardly through an aperture (45) in the lower flange (44), wherein the aperture (45) in the lower flange (44) is aligned with a cutout (46) in a free edge of the lower flange (44) and engagement is effected by engaging the hook (47) in the cutout (46) and then slightly raising the side panel (26) while pushing the same inwardly towards the cabinet before lowering the side panel (26) downwardly onto the hook (47).

6. (original) A method according to claim 5, wherein the upper suspension member of the frame of the cabinet is provided at the upper end of vertical side members (24) of the frame or on extension pieces (48) which are supported by the side members (24) and project laterally outwardly to extend beyond the side members (24).

7. (original) A method according to claim 6, wherein the extension pieces (48) have hooks (49) to engage over the upper edges of the side members (24), in a recess such that the upper edges are below the upper extremity of the side members (24), and be bolted to the side members (24) to be retained in position.

8. (original) A method according to claim 7, wherein each extension piece (48) can be used as either an upper or lower extension piece.
